

# The Architecture of Verification

Bounding Chaos Across  
Physics, Mathematics, and  
Artificial Intelligence

An Overview of Prince Upadhyay's (@reggaesharkk)  
Research Portfolio & The Reggae Shark Universe

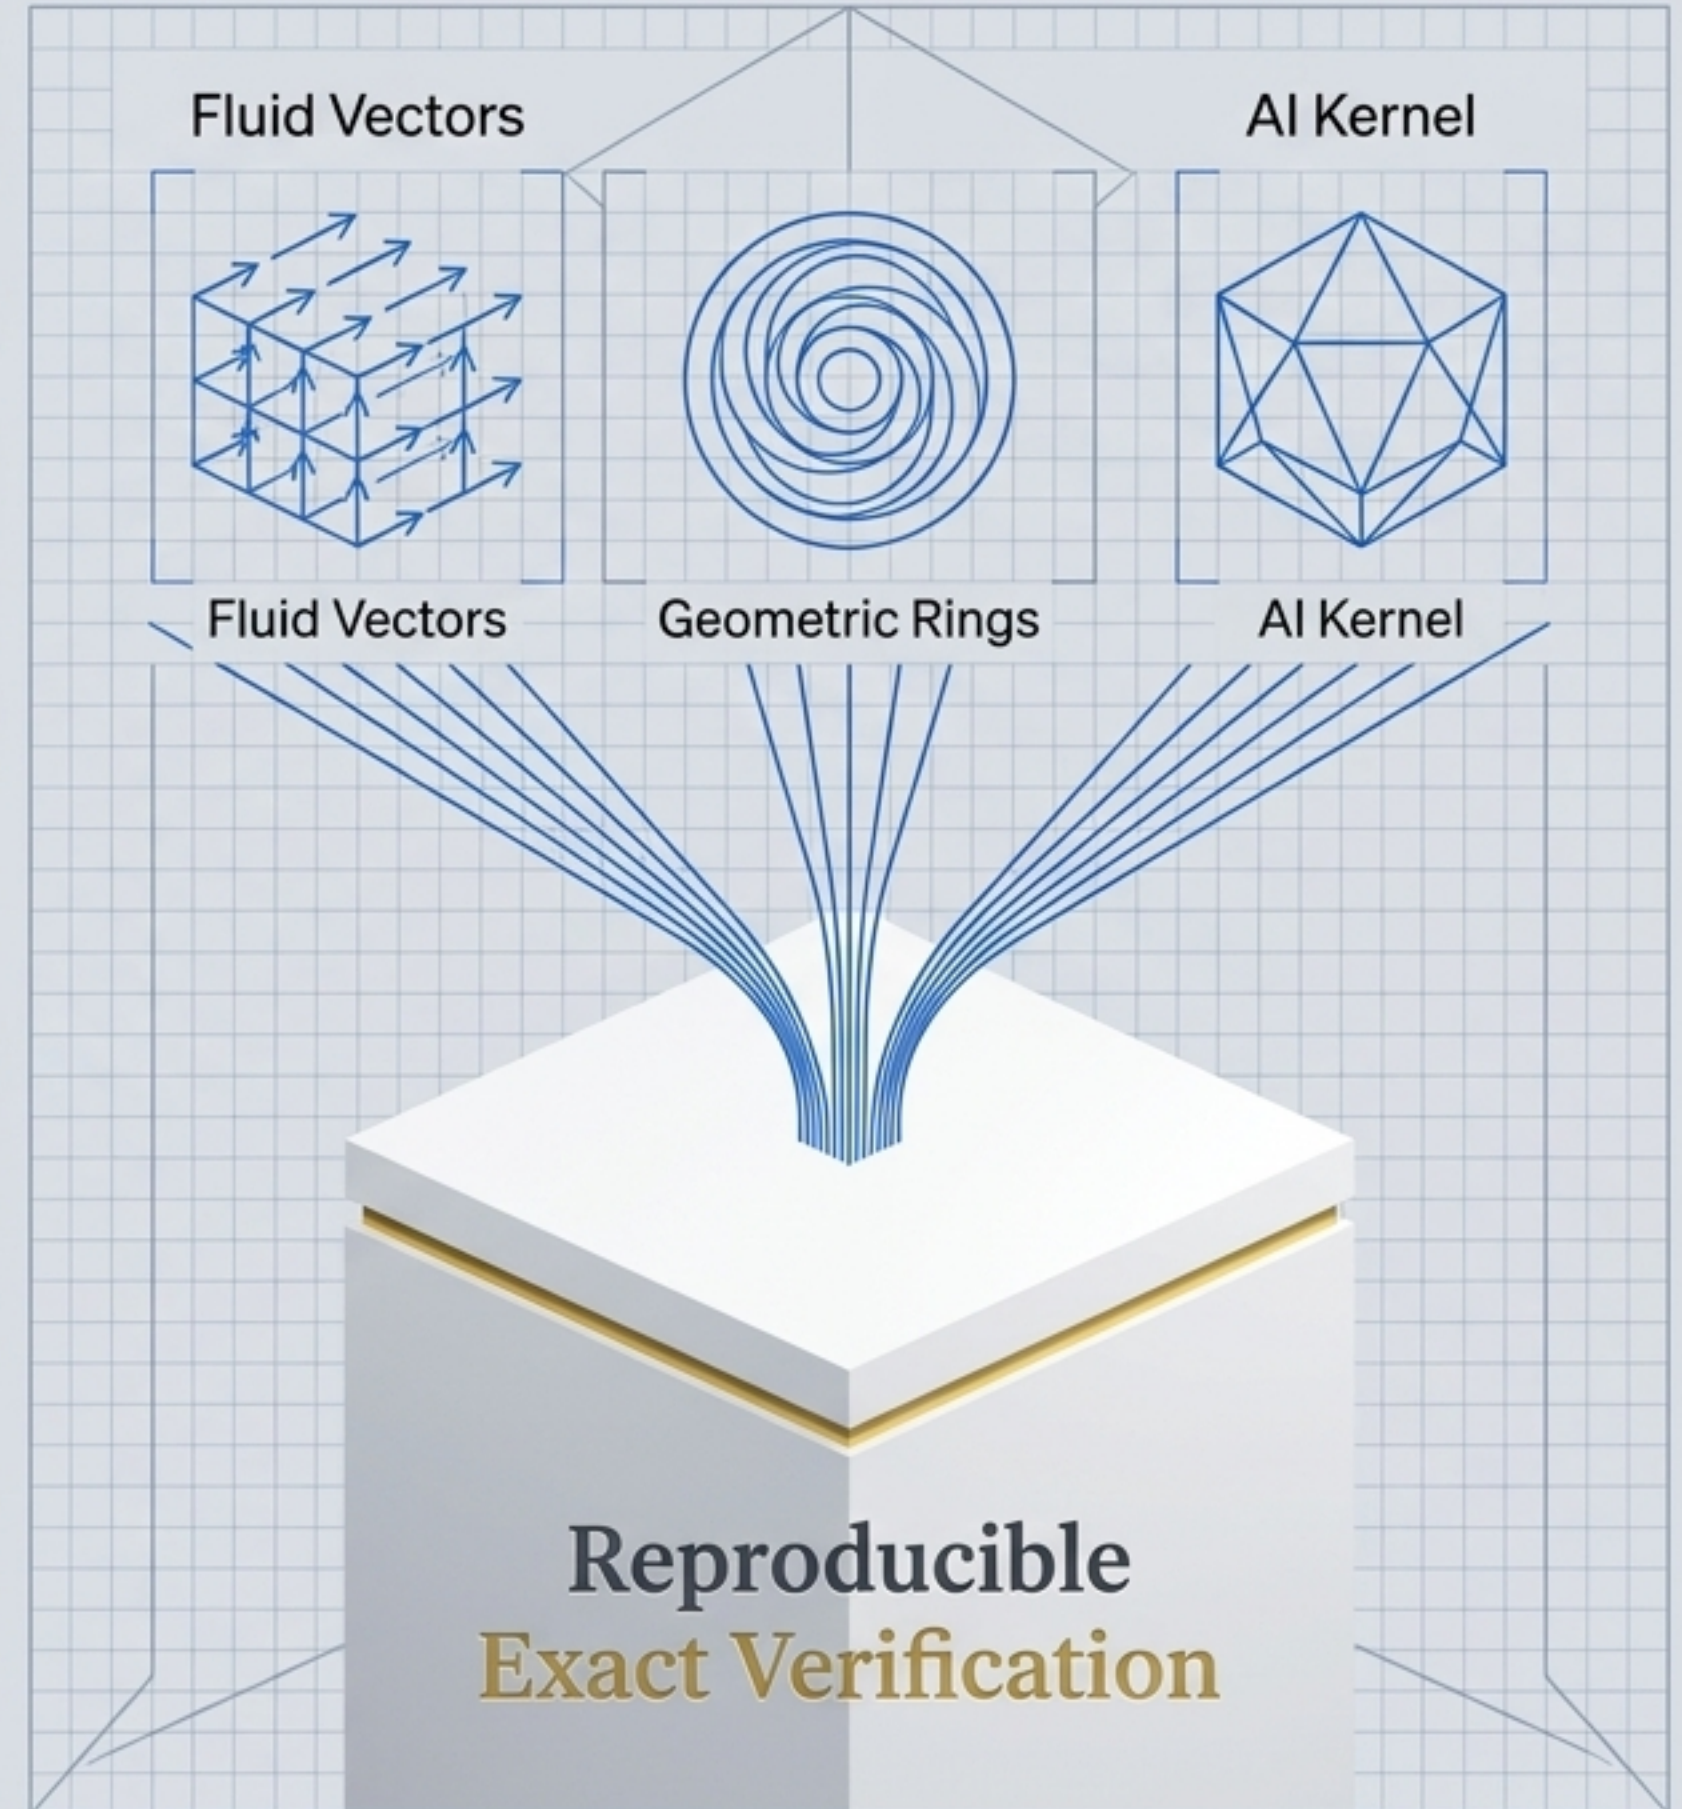

# A Meta-Disciplinary Research Engine

# The Mandate for Provable Bounds in Non-Linear Systems

Whether auditing the chaotic flows of 3D fluids, proving exact thresholds in spectral subsets, or securing self-referential AI architectures, the portfolio is driven by one non-negotiable standard: reproducible, exact, and mathematically frozen verification.

# Triangulating the Research Domains

# Auditing the Unbound: 3D Navier-Stokes

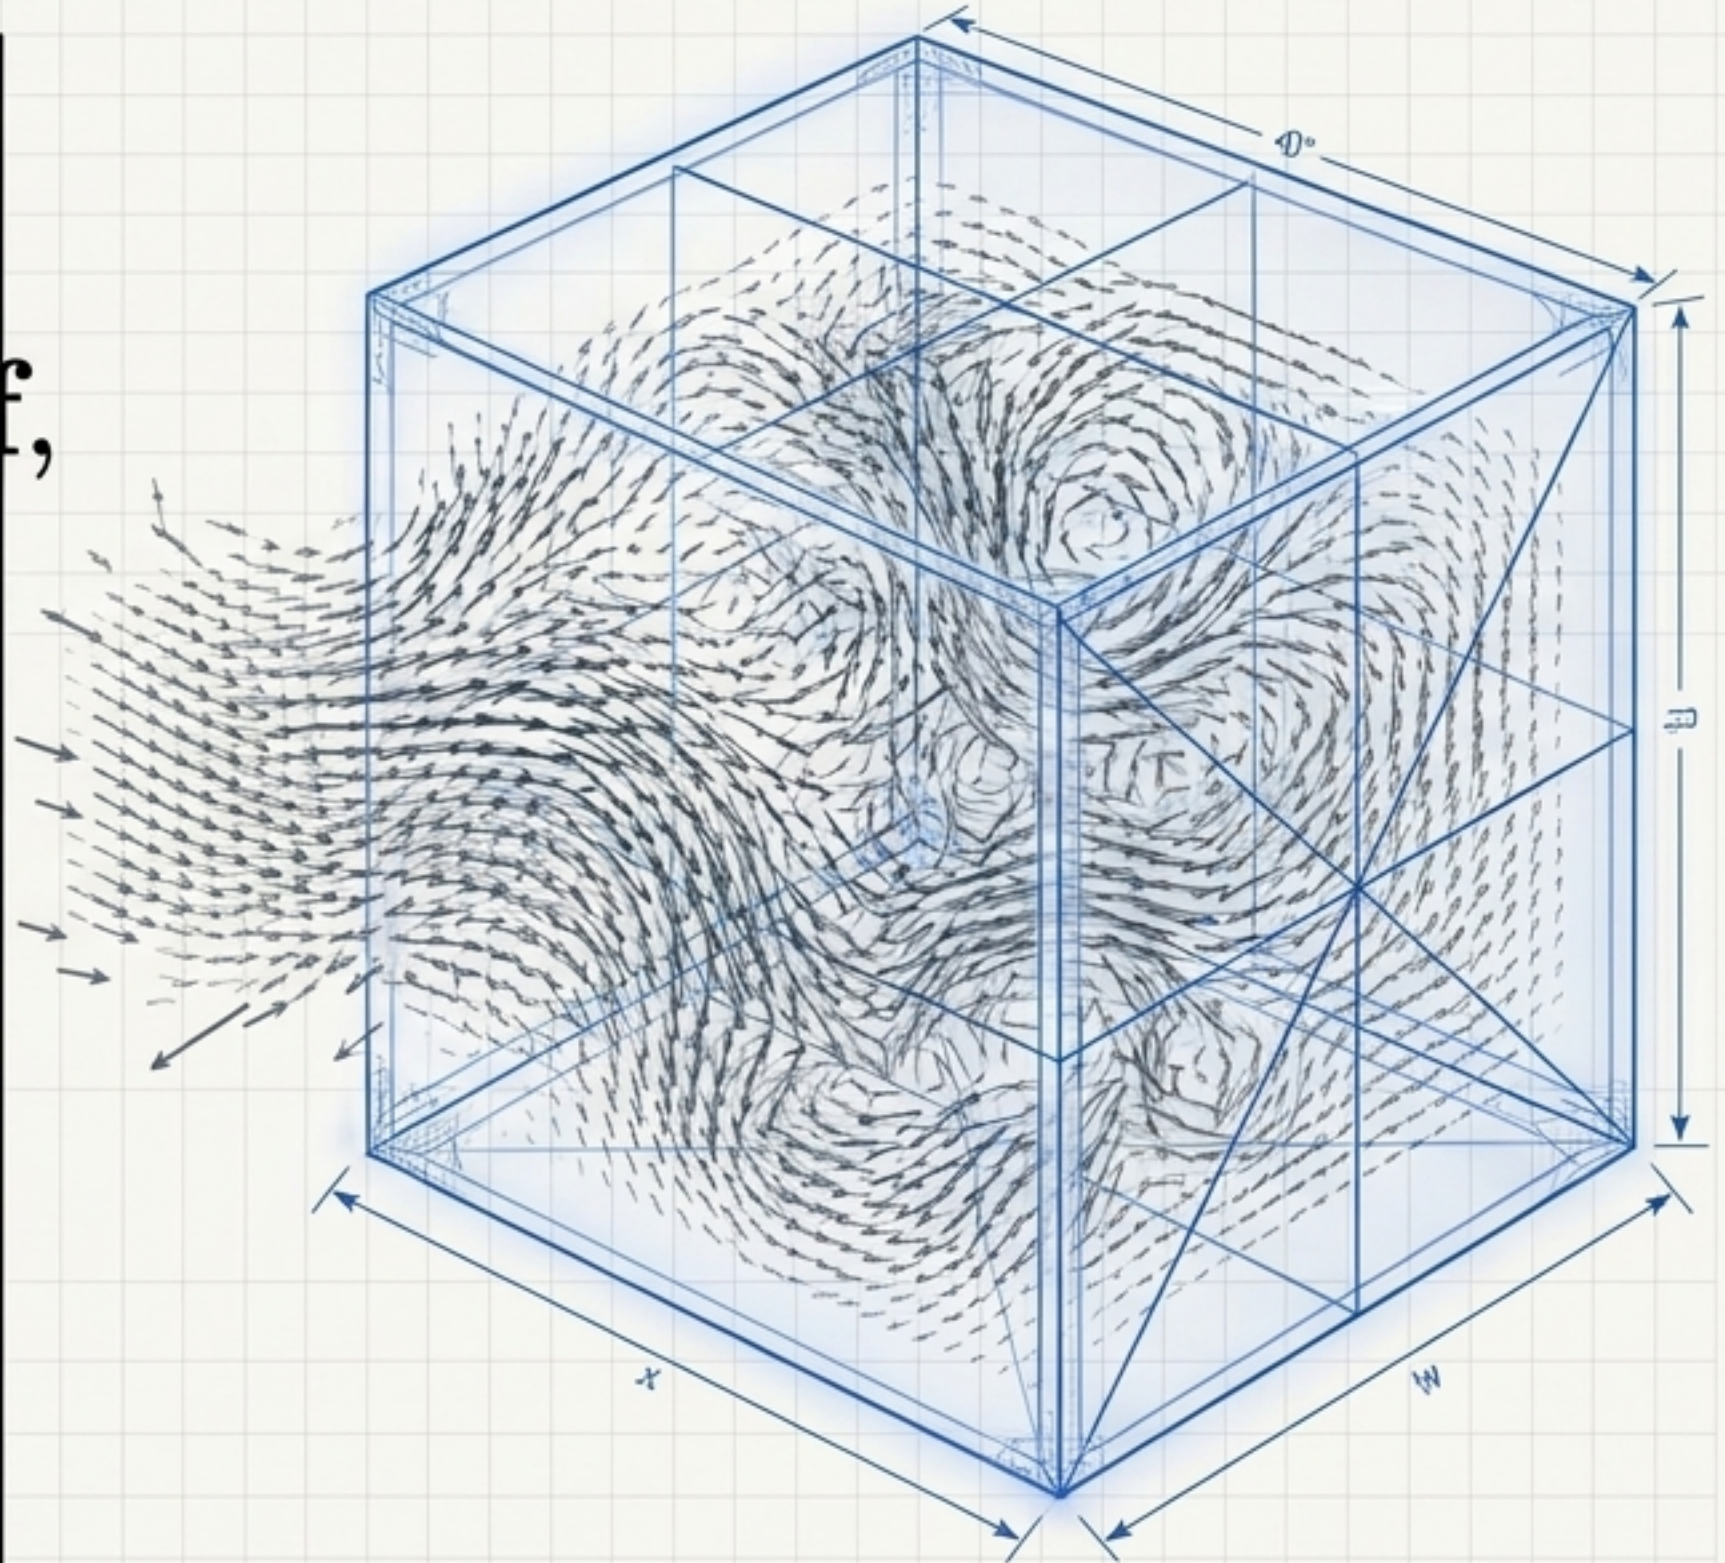

$$\frac{\partial \mathbf{u}}{\partial t} + (\mathbf{u} \cdot \nabla) \mathbf{u} = -\nabla p + \nu \nabla^2 \mathbf{u} + \mathbf{f},$$

$$\nabla \cdot \mathbf{u} = 0$$

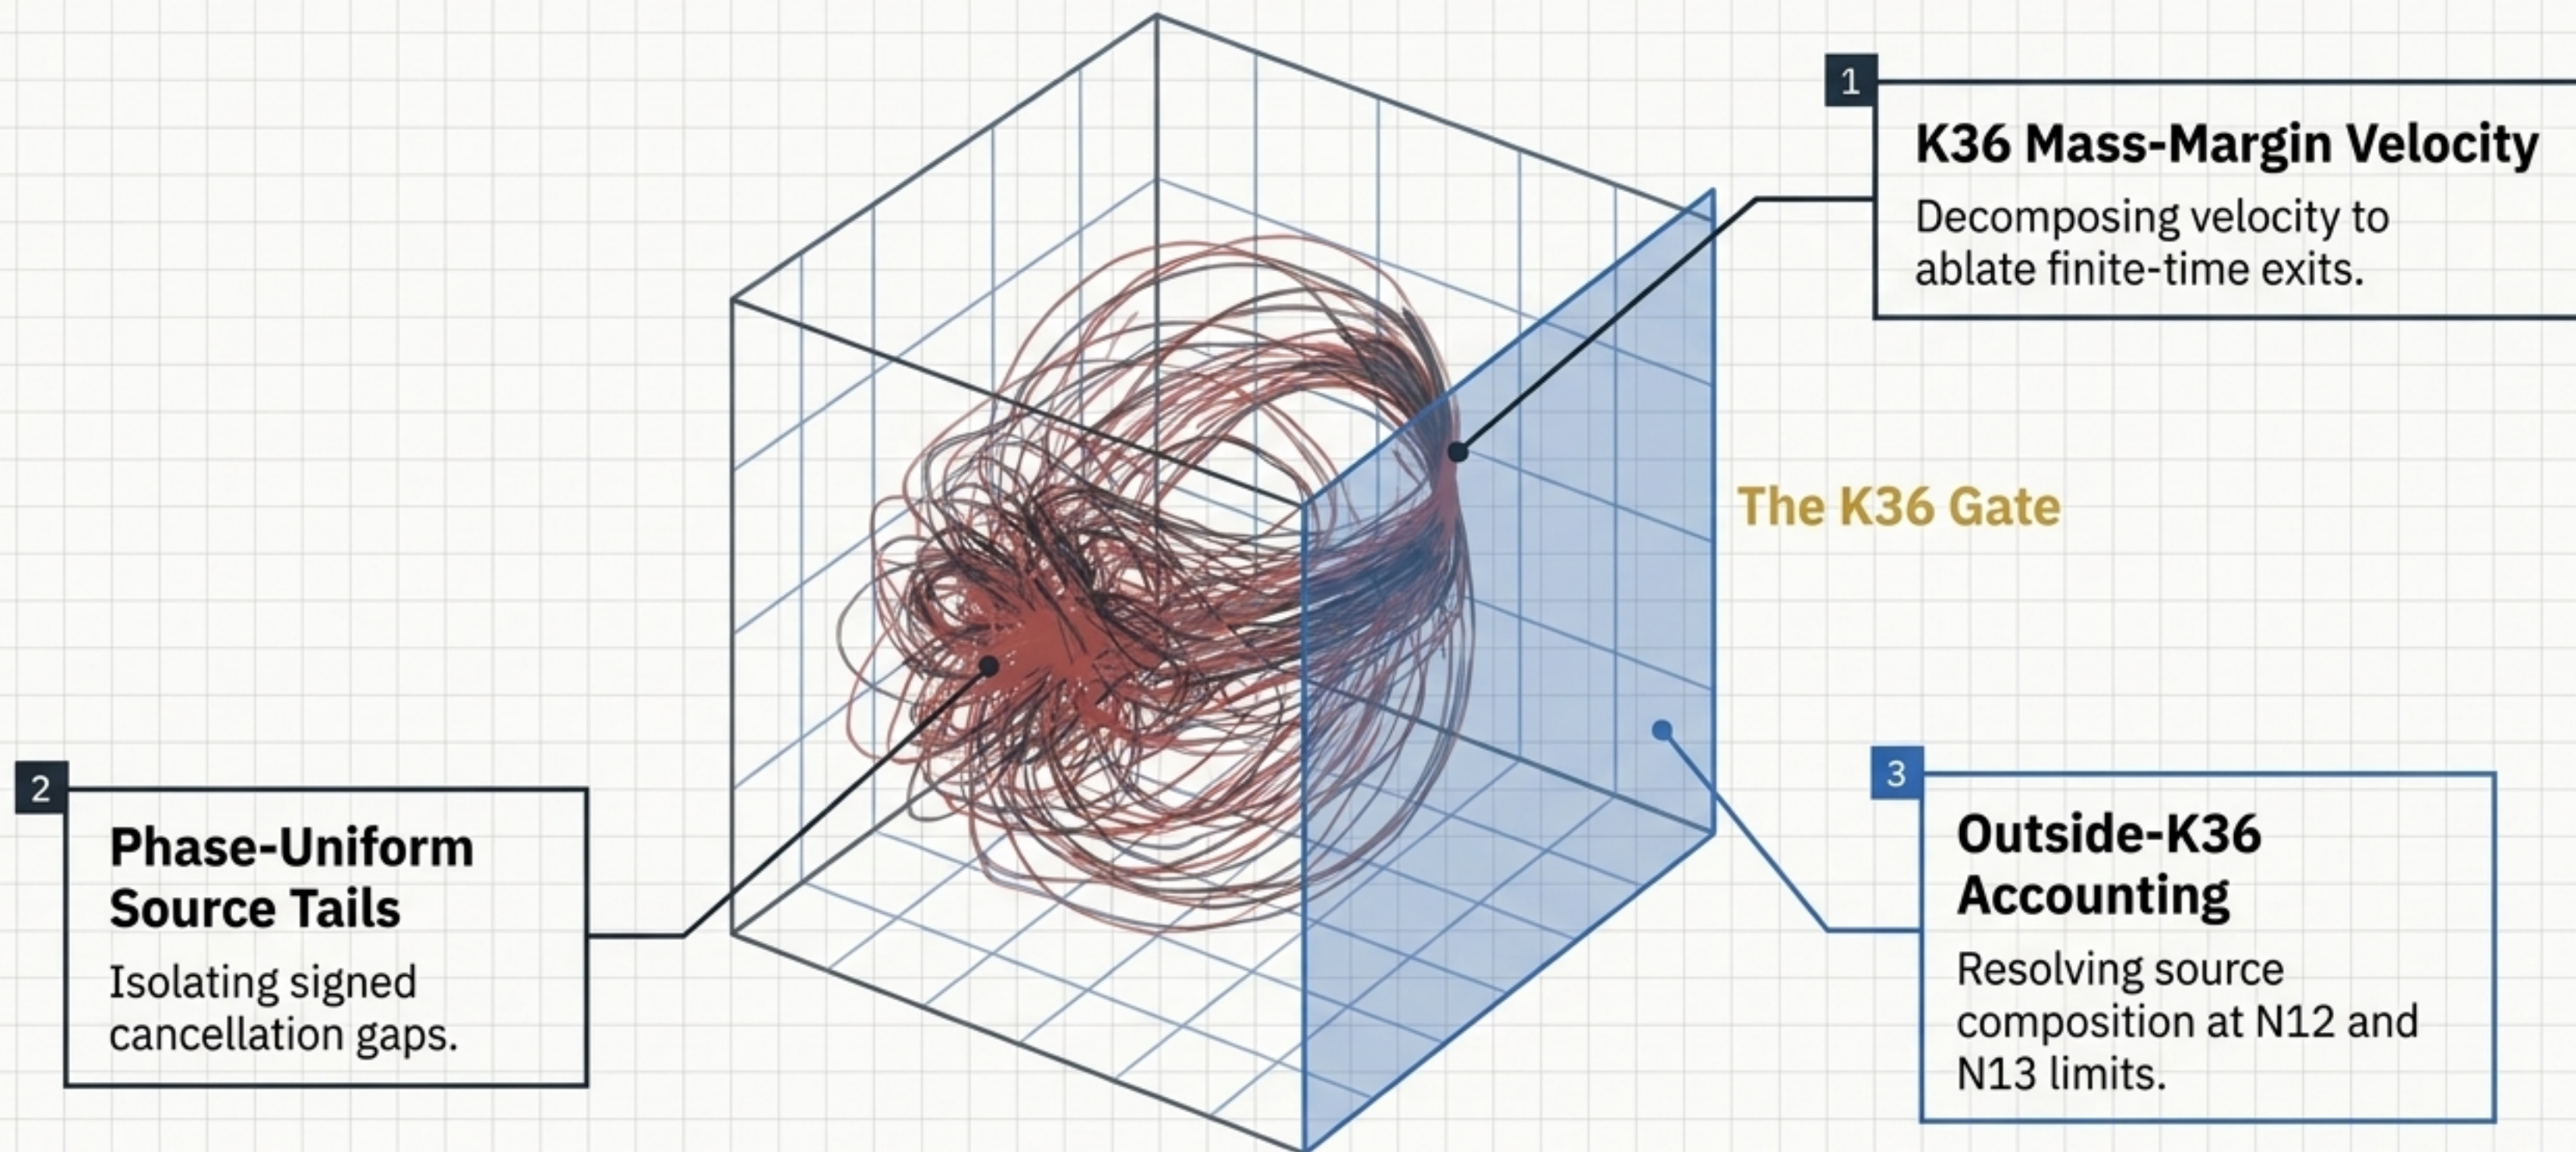

WP16: Reproducible diagnostics  
and open proof gates.

$$\mathbf{u}(\mathbf{x}, t) = \sum_k \hat{\mathbf{u}}_k(t) e^{i\mathbf{k} \cdot \mathbf{x}}$$

$$\hat{\mathbf{u}}_k \in \mathbb{C}^3, \quad |\mathbf{k}| \leq K_{\max}.$$

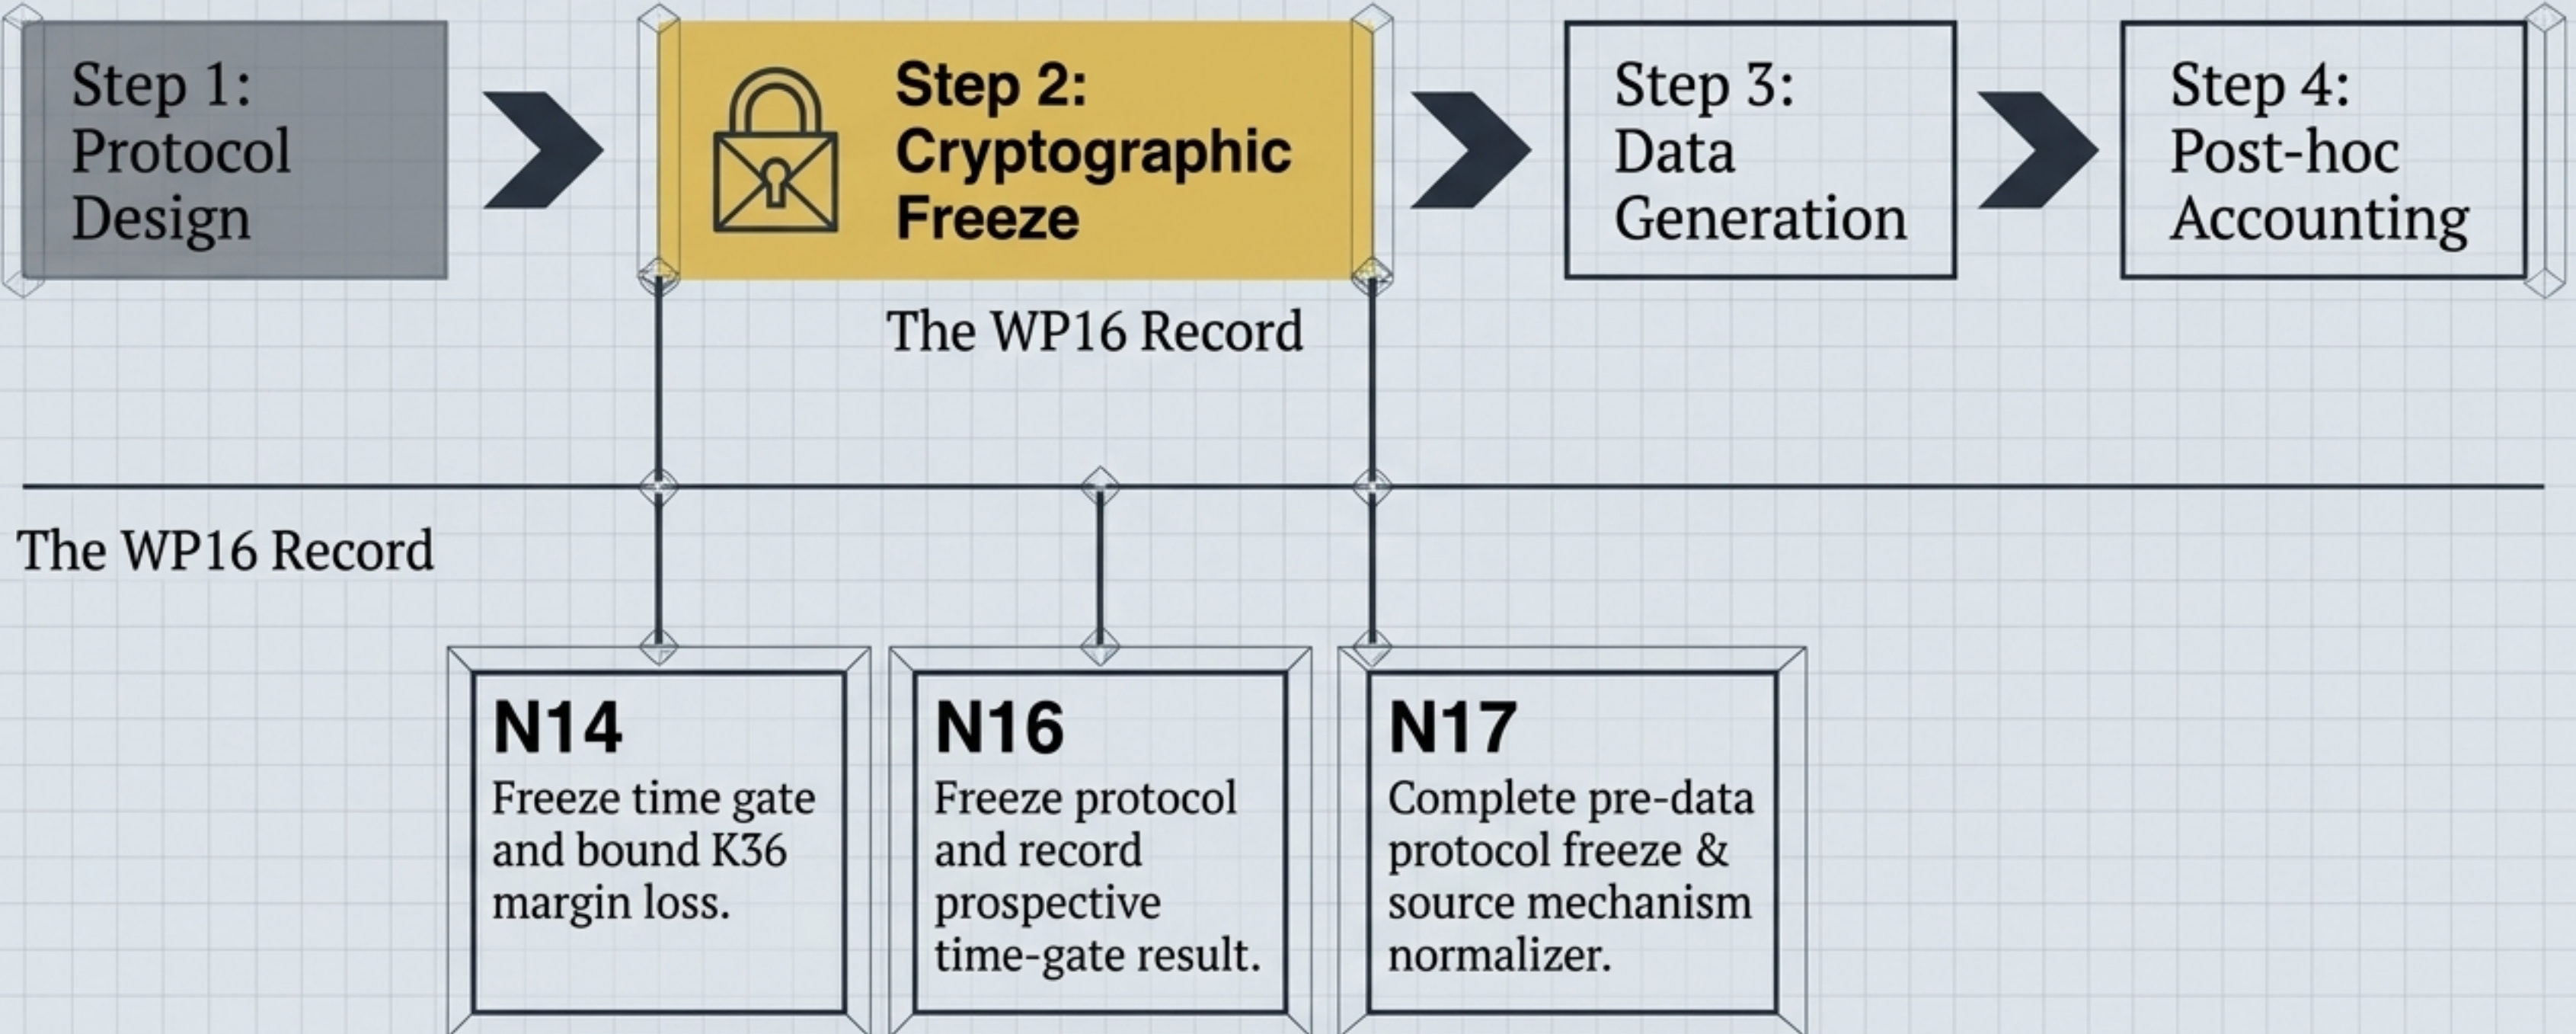

# Bounding Trajectory Exits via K36 Phase Gates

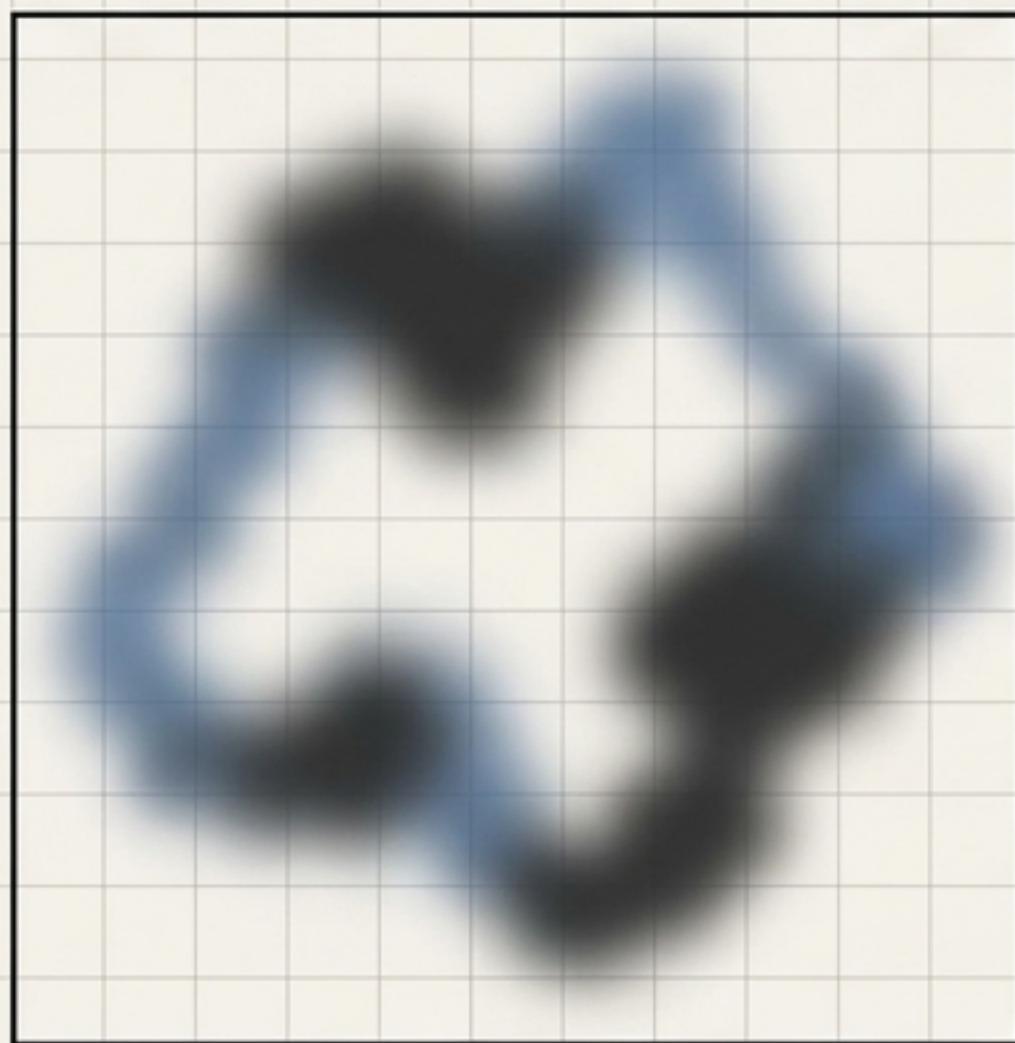

# Unimpeachable Provenance via Pre-Data Protocol Freezes

## Temporal Gating Pipeline

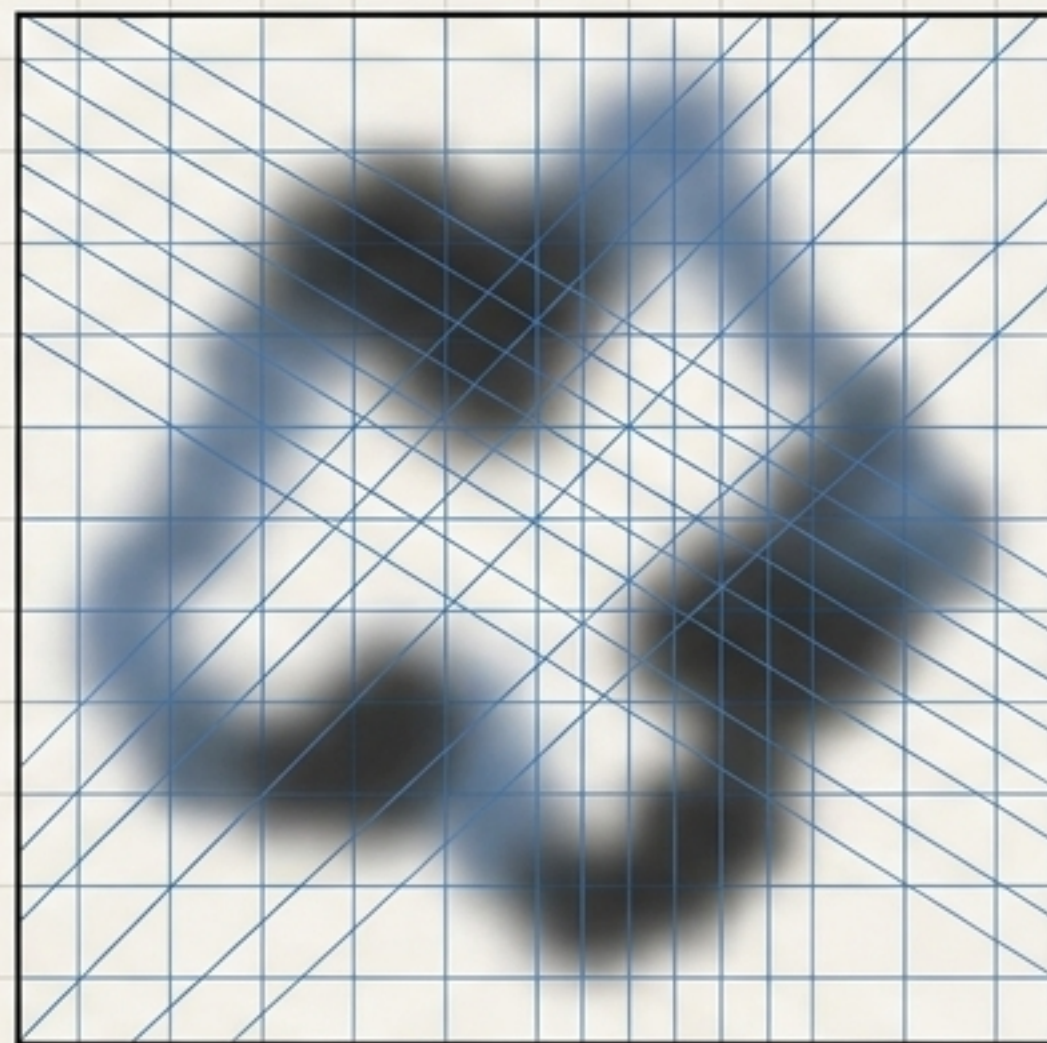

# Exactitude in Subset Selection

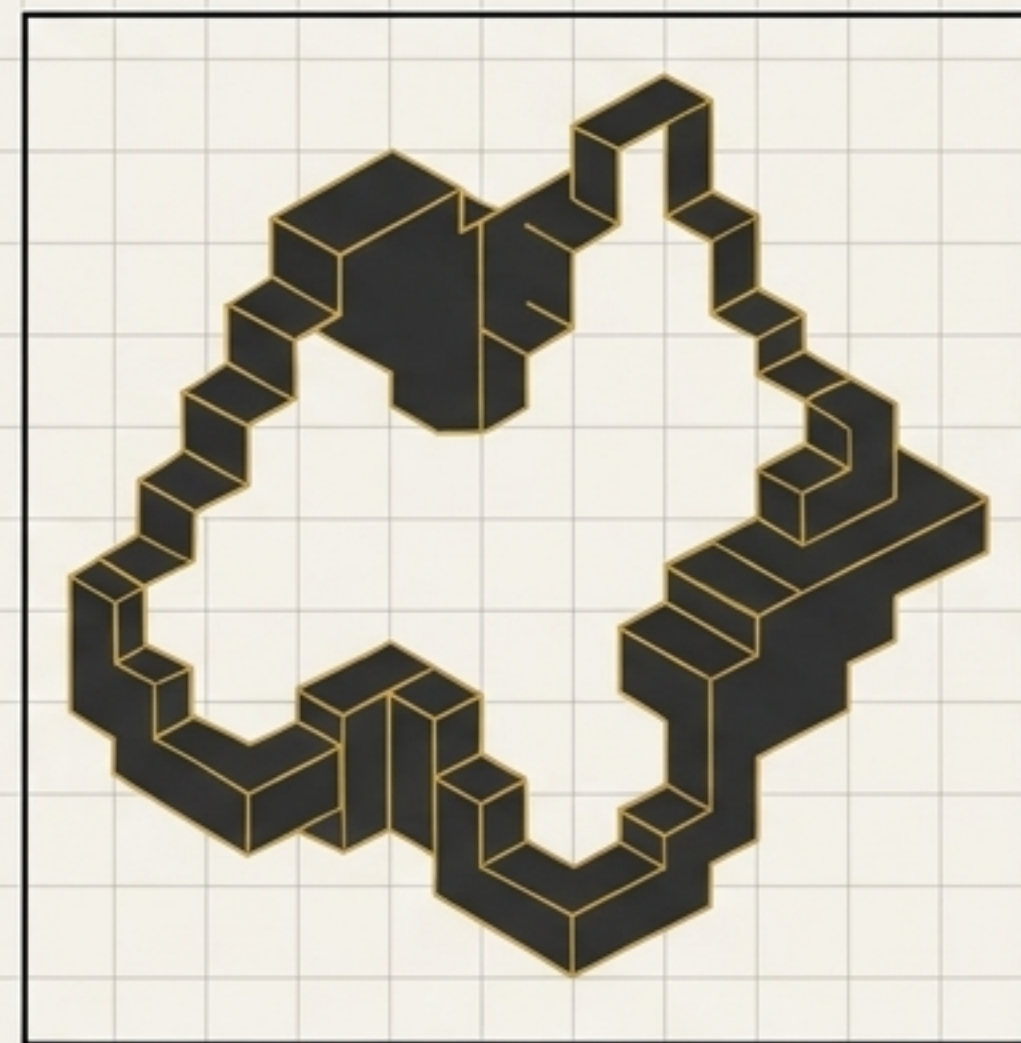

Transitioning from empirical approximation to reproducible exact-integer certificates for fixed LRSC benchmarks.
